DETAILED ACTION

Allowable Subject Matter

1. Claims 1-9 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art does not teach a mechanical chronograph timepiece comprising a hammer support member setting a basic center axis; an eccentric member which is mounted to the hammer support member, which sets an adjustment center axis that is eccentric with respect to the basic center axis of the hammer support member; and in which a direction of an eccentricity of the adjustment center axis with respect to the basic center axis is adjustable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Referring to Capt et al (3901020), Capt teaches a chronograph watch where the axis of rotation of the oscillating lever is carried by a movable member, the movements of which are effected by two further levers of the chronograph mechanism, such that the oscillating movements of oscillating lever around its axis permit control of a part of the operation of the watch counter and the movement of the member carrying the axis of rotation of the oscillating lever permit control of another part of the operation of the counter. One of the second or third levers effect oscillating movement of the hammer-lever.
